

## Protective Coatings ROUSE HILL

### CLIENT

Fulton Hogan

### LOCATION

Rouse Hill,  
New South Wales

### CONTRACT COMPLETION

Dec 2024 - Mar 2026

### SCOPE

Grit blasting tanks  
Application of Sika Cementitious Mortar  
Application of Sika Epoxy

The Rouse Hill Water Treatment Plant is part of Sydney's ongoing infrastructure upgrades supporting water treatment capacity across Western Sydney.

CPR Services commenced coating works at the facility for Fulton Hogan in December 2024, with a team of six crew members delivering the project on site.

The works include grit blasting all tanks, applying Sika 720 Ep-oCem Mortar, followed by a primer coat and two coats of Sika Epoxy 63N, covering approximately 2,300m<sup>2</sup>.

Lessons learned from previous projects allowed the CPR team to implement more efficient processes, contributing to smooth project delivery and positive feedback from clients.

This project highlighted CPR's ability to adapt to new systems, overcome challenges and continue to improve delivery across major infrastructure projects.
